Marinx B., Davail S., Feller G., Gerday C.;

Tuloleotide and derived amino acid sequence of the subtilisin from

The antearctic psychrotroph Bacillus TA39.";

Biochim. Biophys. Acta 1131:111-113(1992).

L. FUNCTION: Subtilisin is an extracellular and peptide amides.

L. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with broad secificity

C. CATALYTIC ACTIVITY: Hydrolysis of proteins with one of degrees of the Subtilisin is associated with onset of sporulation. However, subtilisin

C. CATALYTIC ACTIVITY: Hydrolysis on levels of subtilisin. However, subtilisin

C. SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright. Mol. Biol. 294:1027-1040(1999).
-!- COPACTOR: Binds 3 calcium ions and 1 sodium ion per subunit.
-!- SUBCELLULAR LOCATION: Secreted.
-!- MISCELLANEOUS: Has a pH optimum of 8.5, a temperature optimum of 75 degrees Celsius.
-!- SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                                                                                                                                                                                                 LVITAPNGTKYVGNDFTAPYDNNWDGR-----NNVENVFINAPQSGTYTVEVQAYN 419

Rubtilisin.";

Enchemistry 37:13446-13452(1998)

C. I FUNCTION: Subtilisin is an extracellular alkaline serine protease,

It catalyzes the hydrolysis of proteins and peptide amides.

C. I CATALYTIC ACTIVITY: Hydrolysis of proteins with broad specificity

for peptide bonds, and a preference for a large uncharged residue

C. I COPACTOR: Binds 2 calcium ions per subunit.

C. I COPACTOR: Binds 2 calcium ions per subunit.

C. SUBCELLULAR LOCATION: Secreted.

C. BHOTECHNOLOGY: Used as a detergent protease. Sold under the name

SAVInase by Novozymes.

C. I SUBCELLANBOUS: Secretion of subtilisin is associated with onset of

SOLUTARION, and many mutations which block sporulation at early

The optimal temperature for its caseinolytic activity is 80 degrees Celsius.

-!- SUBCELULAR LOCATION: Secreted.
-!- DEVELOPMENTAL STAGE: Secreted from the early stationary phase until the time the cells case to grow.
-!- PTM: THE N- AND C-TERMINAL PRO-SEQUENCES ARE REMOVED THROUGH THE PROTEOLYTIC ACTIVITY OF AQUALYSIN I ITSELF, IN THAT ORDER. THE C-TERMINAL PRO-SEQUENCES ARE REMOVED THROUGH THE PROTEOLYTIC ACTIVITY OF AQUALYSIN I ITSELF, IN THAT ORDER. THE PROTEASES ACROSS THE ORDER MEMBRANE.
-!- PTM: Two dismitide bonds are present.
-!- SIMILARITY: Belongs to peptidase family S8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      10.9%; Score 245.5; DB 1; Length 513; 26.0%; Pred. This is the amino acid sequence of a novel protease of Bacillus sp. JP170 (NCIB 12513), as deduced from the nuclectide sequence of an isolated gene (see ANP62292). The entire protein, including the signal peptide and prepro region, has 77% identity to alkaline protease Y (see AAW89948) from Bacillus. The invention provides vectors, recombinant host cells and methods for the recombinant production of the protease. The protease is used in laundry and dishwashing detergents, for institutional and industrial cleaning, and for leather processing, as well as for choustrial cleaning, and for leather processing, as well as for hydrolysates, for flavour development through hydrolysis of proteins charactering and enhancing the degree of hydrolysis of proteins, degradation of undealied peptides and in enzymatic synthesis of peptides. It has enhanced stability towards oxidation under alkaline conditions, it is consistent conditions, provides mutant cells in which the protease activity is diminished. Such cells can be used for the production of heterologous recombinant proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GARIHTNSWGAPVNGAYTTDSRNVDDYVRKNDMTILFAAGNEGPGSGTISAPGTAKNAIT 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      원
                                                                                                                                                                                                            This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38$) compared to prior art alkaline proteases (31 and 22$). This sequence represents a fragment of the alkaline protease KP43 from Bacillus sp strain KSW-KP43 which is used to create the modified protease represented in AAMS/0902.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    446
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          299
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                506
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                566
                                                                                                   The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range pH 6-12, (b) after 80% of of its optimum its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oles acidlus. The protease ability to digest casein is not inhibited by alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 dag. C it is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by 809-PAGE. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                             This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease KP9860 from Bacillus sp strain KSM-KP9860 described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                 New modified alkaline proteases useful in detergent compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease A-1 from Bacillus sp NCIB12289 described in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Okuda M,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hatada
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT
```

```
The invention relates to alkaline proteases produced by strains of Bacillus. The proteases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The alkaline protease of the invention has the following properties: (a) it is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 9+6.12, (b) after 30 minutes at 40 deg. C it is stable over the pH range 6-11, (c) its isoelectric point is 8.9-9.1, (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGS. The alkaline proteases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidiaing agents allows the bleaches. The present sequence represents an alkaline protease of the invention. (Updated on 20-MAR-2003 to correct DR field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       625
                                                                           Bacillus. The proceases ability to digest casein is not inhibited by oleic acid and they have a high stability to oxidising agents. The stability to oxidising agents. The is active over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 4-13 and has at least 80% of its optimum activity over the pH range 6-11; (b) after 30 minutes at 40 deg; (i is stable over the pH range 6-11; (c) its isoelectric point is 8.9-9.1; (d) its ability to digest casein is not inhibited by oleic acid; (e) it has molecular weight about 43,000 by SDS-PAGE. The alkaline proceases can be used as enzymes in washing compositions for use in automatic dishwashers and for washing clothes. The stability to oxidising agents allows the bleaches. The present sequence represents an alkaline protease. (Updated on 20-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            60

This invention describes novel Bacillus sp. alkaline proteases useful in detergent compositions, especially in laundry, bleaching or automatic dishwasher detergents. The novel proteases have an increased detergency $ (34 - 38%) compared to prior art alkaline proteases (31 and 23%). This sequence represents a fragment of the alkaline protease SD-521 from Bacillus sp strain SD-521 (FERM BP-11162) described in the method of the
                                                                                                                                                                                                                                                                                                                                    387 TVGATENLRPSFGSYADNINHVAQFSSRGPTKDGRIKPDVMAPGTXILSARSSLAPDSSF
